

Basic @PROMIS Training

This 1/2 day instructor led course introduces you to @PROMIS - the web based graphic tracking application. Tutorial instructions will be provided for multiple material and equipment operational scenarios, including special situations such as tracking when equipment capability is defined, performing actions for batches of lots, consuming material, changing equipment to less available states, tracking lots by alias association, and so on.

Improve the efficiency of your operations staff with this practical class. We can modify this class to use your process flows or help your training staff implement a similar class for your operations staff. See the Training Service page on our web site for details.

Prerequisites

- None.
- Experience with manufacturing procedures at your site an asset.

Who Should Attend

- Operators
- Line Supervisors
- Others interested in working with @PROMIS in the production environment.

What You Will Achieve

You will learn to track lots, consume material and manage equipment with @PROMIS. These skills will be immediately applicable to your job processing material in a production facility.

Topics

- Overview
- The @PROMIS Environment
