

## PROMIS Operational Data Store Training

The PROMIS Operational Data Store (ODS) provides a replica of the PROMIS database that is updated in real time and available for reporting and other activities.

In this 2 day lecture-lab course you will learn about the architecture of the ODS and how to setup and maintain it. You will examine the required replica configurations on the PROMIS side and how to control and monitor your system. You will learn and practise both setup and recover options and examine a variety of disaster recovery scenarios. You will also discuss potential applications for the ODS and methods of integrating to it.

### Prerequisites

- Basic Understanding of PROMIS
- Working Knowledge of Oracle

### Who Should Attend

- PROMIS System Managers
- PROMIS Programmers and Integrators
- Reporting and Database Specialists
- Others interested in how the PROMIS Operational Data Store operates

### What You Will Achieve

- An understanding of the PROMIS Operational Data Store's architecture.
- Management and maintenance skills to help keep your ODS healthy and active.
- The skills necessary to define your reporting requirements from the PROMIS database.
- The ability to use ODS effectively at your site.

### Topics

- PROMIS Operational Data Store Architecture
- Replica Configurations
- Control Menu Options
- System Setup and Maintenance
- Disaster Recovery Scenarios
- Monitoring PROMIS ODS
- Example Clients
