

PROMIS / UNIX System Management Training

This 2 day lecture course concentrates on the architecture of PROMIS and the relationships between PROMIS, UNIX and ORACLE. It covers basic management functions like system startup and shutdown , submitting and monitoring builds and adding PROMIS user accounts. It also covers more advanced topics, like database backup and system monitoring.

You will learn about the PROMIS environment, the structure of the PROMIS database, how to customize PROMIS for your site and gain an overview of the GUI applications that partner with PROMIS.

Prerequisites

- Basic Understanding of PROMIS
- Working Knowledge of UNIX
- Working Knowledge of Oracle

What You Will Achieve

- The basic skills you need to manage your PROMIS system effectively
- An architectural background that will make PROMIS programmers and integrators productive

Who Should Attend

- PROMIS System Managers
- UNIX System Managers
- PROMIS Programmers and Integrators
- Key Users
- Oracle Database Administrators
- Others interested in how PROMIS operates

Topics

- PROMIS Architecture
- The PROMIS Database
- The PROMIS Build
- PROMIS Control Menu
- PROMIS Partner Applications
- System Management
- PROMIS Management
- Site Customization
- PROMIS Account Management
